

The Virginia Mental Health Access Program

Collaborative care for children and adolescents.

The Virginia Mental Health Access Program (VMAP) is a statewide initiative that helps health care providers take better care of children and adolescents with mental health conditions through provider education and increasing access to child psychiatrists, psychologists, social workers, and care navigators.

The Problem

Currently, Virginia ranks 41st in the nation for the availability of its mental health workforce (State of Mental Health in America, 2021). Because of this, many of Virginia's children go without necessary mental/behavioral health services.

In Virginia, there are

only 13

child and adolescent psychiatrists available

per 100,000

children below the age of 18
(American Academy of Child and Adolescent Psychiatry, 2019).

64% of Virginia localities

are mental health professional shortage areas
(VDH Data from HRSA, 2021)

Over

65% of

pediatricians

reported they lacked mental and behavioral health knowledge and skills
(McMillan, J., Land, M., & L. Leslie, 2017).

VMAP is the Solution

VMAP ensures that more children have access to providers who are better able to screen, diagnose, manage, and treat mental health through **four key components**:

- 1 Education** for primary care providers (PCPs) on screening, diagnosis, management, and treatment of pediatric mental health conditions.
- 2 Access** for PCPs to **telephonic consultations** via regional VMAP hubs comprised of child and adolescent psychiatrists, psychologists, and/or social workers.
- 3 Care navigation** to help identify additional regional mental health services that may benefit PCPs' patients and their families.
- 4 Telehealth visits*** to assist with VMAP consults.
*Coming soon

VMAP is Already Making a Necessary Change

VMAP has already trained over **500 primary care providers** who can now better provide mental health services to their patients.

VMAP has a **full-time consultation line** that Virginia primary care providers can call for child psychiatry/psychology consultations and care navigation services.

Over **88% of VMAP consultations** resulted in the PCP continuing to support the patient in their practices.
