The Virginia Mental Health Access Program
Collaborative care for children and adolescents.

The Virginia Mental Health Access Program (VMAP) is a statewide initiative that helps health care providers take better care of children and adolescents with mental health conditions through provider education and increasing access to child psychiatrists, psychologists, social workers, and care navigators.

The Problem
Currently, Virginia ranks 41st in the nation for the availability of its mental health workforce (State of Mental Health in America, 2021). Because of this, many of Virginia’s children go without necessary mental/behavioral health services.

In Virginia, there are only 13 child and adolescent psychiatrists available per 100,000 children below the age of 18 (American Academy of Child and Adolescent Psychiatry, 2019).

64% of Virginia localities are mental health professional shortage areas (VDH Data from HRSA, 2021).

Over 65% of pediatricians reported they lacked mental and behavioral health knowledge and skills (McMillan, J., Land, M., & Leslie, 2017).

In Virginia, there are only 13 child and adolescent psychiatrists available per 100,000 children below the age of 18 (American Academy of Child and Adolescent Psychiatry, 2019).

Over 65% of pediatricians reported they lacked mental and behavioral health knowledge and skills (McMillan, J., Land, M., & Leslie, 2017).

The Virginia Mental Health Access Program (VMAP) is a statewide initiative that helps health care providers take better care of children and adolescents with mental health conditions through provider education and increasing access to child psychiatrists, psychologists, social workers, and care navigators.

VMAP is the Solution
Through its education and regional hub services, VMAP ensures that more children have access to providers who are better equipped to manage their mental health.

1. **Education** for primary care providers (PCPs) on screening, diagnosis, management, and treatment of pediatric mental health conditions.

2. **Regional hubs** providing PCPs access to the following resources and supports for their patients 21 and under:

   - Telephonic consultation with child psychiatrists and/or other licensed behavioral health providers
   - Care navigation to help identify additional regional mental health services that may benefit PCPs' patients and their families

VMAP is Already Making a Necessary Change
VMAP has already trained over 600 primary care providers who can now better provide mental health services to their patients.

VMAP has a full-time consultation line that Virginia primary care providers can call for child psychiatry/psychology consultations and care navigation services.

Over 88% of VMAP consultations resulted in the PCP continuing to support the patient in their practices.
